The real challenges to fishing gear when new, are set by the industry's severe environment. These conditions may result in early failures caused by wear and corrosion.

PROFILE CHAIN™

•**Wear:** The revolutionary design and the use of wear resistant materials have greatly reduced the effects of wear, the main cause of reduction in a chain's tensile strength, compared to traditional chain.

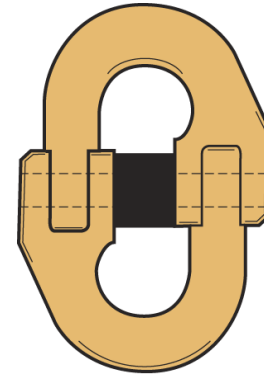

•**Corrosion and Fatigue:** Increased contact areas together with the use of improved materials and heat treatment, have radically reduced chances of stress and fatigue.
